CSC289 Programming Capstone Project

Project Name: Plague Village

Team Number: 6

Team Project Manager: Janay Snell

Team Members: Zoe Craig, Gavin McKenzie, Oscar Salinas-Villarreal, Maria Del Carmen Caballero Hernandez, Andrew Thanh Dang, Noah Yarosz

Software Installation Guide: Plague Village

Introduction

Plague Village is an interactive survival-based game where players make decisions that impact their chances of survival during a plague outbreak. This guide provides instructions for installing and running the game.

System Requirements

- OS: Windows 10 or later / macOS / Linux
- Browser: Google Chrome, Firefox, or Edge (if web-based)
- RAM: 4GB minimum
- Storage: Minimal (under 100MB)
- Additional: Python 3.x

Downloading the Installer

- Clone or download from GitHub repository: https://github.com/JanayLS/Odds-of-Survival-Calculator---Team-6.git

- Or extract the provided ZIP file

Installing the Software

- Download or clone the repository
- Open the project folder in VS Code or terminal
- (If Flask app):
  - Install dependencies:
    pip install -r requirements.txt
- Ensure all files are in correct directories

Launching the Software

- If web-based:
  - Open index.html in a browser
- If Flask:
  - Run: python app.py
  - Open browser at: http://127.0.0.1:5000

Uninstalling the Software

Delete the project folder from your system.

Troubleshooting

- App not loading → check file paths or server is running
- Errors → ensure dependencies are installed
- Page not displaying correctly → try another browser
